

SECOND EDITION

# MANAGING SUPPLY CHAIN AND OPERATIONS

## An Integrative Approach

### **S. Thomas Foster**

Donald L. Staheli Professor and Department Chair  
of Marketing and Global Supply Chain  
Marriott School of Management  
Brigham Young University

### **Scott Sampson**

Hazel S. Thorsell Professor and Area Leader of  
Global Supply Chain Management  
Marriott School of Management  
Brigham Young University

### **Cindy Wallin**

Associate Professor of Global Supply Chain  
Management  
Marriott School of Management  
Brigham Young University

### **Scott Webb**

Assistant Professor of Global Supply Chain  
Management  
Marriott School of Management  
Brigham Young University

New York, NY

**Vice President, Business, Economics, and UK Courseware:** Donna Battista

**Director of Portfolio Management:** Stephanie Wall

**Editorial Assistant:** Linda Siebert Albelli

**Vice President, Product Marketing:** Roxanne McCarley

**Senior Product Marketer: Product Marketer:** Kaylee Carlson

**Product Marketing Assistant:** Marianela Silvestri

**Manager of Field Marketing, Business Publishing:**

Adam Goldstein

**Executive Field Marketing Manager: Field Marketing**

**Manager:** Nicole Price

**Vice President, Production and Digital Studio, Arts and**

**Business:** Etain O'Dea

**Director of Production, Business:** Jeff Holcomb

**Managing Producer, Business:** Melissa Feimer

**Content Producer:** Yasmita Hota

**Operations Specialist:** Carol Melville

**Design Lead:** Kathryn Foot

**Manager, Learning Tools:** Brian Surette

**Content Developer, Learning Tools:** Lindsey Sloan

**Managing Producer, Digital Studio and GLP, Media**

**Production and Development:** Ashley Santora

**Managing Producer, Digital Studio:** Diane Lombardo

**Digital Studio Producer:** Regina DaSilva

**Digital Studio Producer:** Alana Coles

**Digital Content Project Lead:** Courtney Kamauf

# About the Authors

**S. Thomas Foster** is the Donald Staheli Professor and department chair of marketing and global supply chain management at Brigham Young University's Marriott School of Management. He is an internationally recognized expert in quality and global supply chain management and has experience in manufacturing, financial services, and international oil exploration. He has consulted for more than 30 organizations, including Eaton/Cutler Hammer, Hewlett-Packard, Heinz Frozen Foods, Hyundai Corporation, and the U.S. Department of Energy.

Foster has served on the editorial boards of the *Journal of Operation Management* and *Decision Sciences* and is Editor in Chief of the *Quality Management Journal*. He has published more than 80 articles in journals such as *Decision Sciences*, *Journal of Operations Management*, *International Journal of Production Research*, and *Quality Management Journal*. His book *Quality Management: Integrating the Supply Chain* is an international best seller. He recently served on the Malcolm Baldrige Board of Overseers and was awarded the prestigious Instructional Innovation Award from the Decision Sciences Institute.

**Scott Sampson** is the Hazel S. Thorsell Professor of global supply chain management with the Marriott School of Management at Brigham Young University. He teaches MBA, executive MBA, and undergraduate courses in services management and customer relationship management.

Sampson is the author of the books *Understanding Service Businesses* and *Essentials of Service Design and Innovation*. His award-winning research involves service design paradigms, service quality measurement, and service supply chains. He has published research in leading academic journals, including *Management Science*, *Production and Operations Management*, *Operations Research*, *Decision Sciences*, and *Journal of Operations Management*. He received his MBA and PhD degrees from the University of Virginia and taught at Florida State University prior to joining the Brigham Young University faculty.

**Cindy Wallin** is an associate professor of global supply chain management at Brigham Young University's Marriott School of Management. She earned her PhD in supply chain management from the W. P. Carey School of Business at Arizona State University. Wallin's research focuses on buyer-supplier interfaces in the form of trust-based relationships, information sharing, collaboration, and collaborative inventory management approaches. Her research has been published in various journals, including *Decision Sciences Journal*, *Journal of Supply Chain Management*, *Quality Management Journal*, and *Journal of Business Logistics*.

Before pursuing her doctoral studies, Wallin was a commodity team manager for Intel Corporation. During her eight years at Intel, she also held the positions of senior buyer, purchasing manager, stores manager, and commodity manager. Before her graduate studies, Wallin also worked as an auditor for the Defense Contract Audit Agency.

**Scott Webb** is an associate professor of global supply chain management at Brigham Young University and specializes in logistics management. He received his PhD in logistics and operations management from the Eli Broad College of Business at Michigan State University. In addition to his PhD, he earned an MS degree in logistics management from the Air Force Institute of Technology and a BA in experimental psychology from the College of Idaho.

During his Air Force career, Webb worked on both base- and Pentagon-level assignments. He separated from active duty military service in 2008 at the rank of major and after earning both AF Commendation Medals and the AF Meritorious Service Medal.

# Brief Contents

1

## Integrating Supply Chain and Operations Management 1

**Chapter 1** Introduction to Supply Chain and Operations Management 2

**Chapter 2** Supply Chain and Operations Strategy 21

2

## Innovating Supply Chain and Operations 47

**Chapter 3** Product and Process Design and Mapping 48

**Chapter 4** Service Design 92

**Chapter 5** Customer Relationship Management 120

3

## Impacting Supply Chain and Operations Performance 141

**Chapter 6** Strategic Sourcing 142

**Chapter 7** Supplier Management 166

**Chapter 8** Demand Management and Forecasting 195

**Chapter 9** Inventory Management Fundamentals and Independent Demand 242

**Chapter 10** Sales and Operations Planning and Enterprise Resource Planning 273

**Chapter 11** Logistics 305

4

## Improving Supply Chain and Operations Management Performance 339

**Chapter 12** Project Management 340

**Chapter 13** Supply Chain Quality Management 381

**Chapter 14** Statistical Process Control 409

**Chapter 15** Lean and Six Sigma Management and Leading Change 452

## Integrating Supply Chain and Operations Management

1

### Chapter 1 Introduction to Supply Chain and Operations Management 2

- 1 Understand Why You Are Studying Supply Chain and Operations Management 3
    - Processes 4
    - Supply Chain Globalization 5
  - 2 Define, Understand, and Apply the Components of Supply Chain and Operations Management 8
    - Supply Chain Management 9
    - Supply Chain Flows 10
    - Service Supply Chains 11
    - Operations Management 11
    - Combining Supply Chain and Operations Management 12
    - Developing Skills for Your Career 14
  - 3 Explain the Integrative Model for Supply Chain and Operations Management 15
    - The Operating Core 15
    - Upstream Collaboration 16
    - Downstream Collaboration 16
    - Logistics, Analytics, and Quality Management 17
    - Strategic Integration 17
  - 4 Explain the Four I's 17
    - Impacting 17
    - Improving 17
    - Innovating 17
    - Integrating 18
    - Supplier Responsibility at Apple 18
- Summary 18 • Key Terms 19 • Integrative Learning Exercise 19 • Integrative Experiential Exercise 19 • Discussion Questions 19
- Case: Williamston Manufacturing 20

### Chapter 2 Supply Chain and Operations Strategy 21

- 1 Understand and Use Generic SC&O Strategies 22
  - Generic Strategies 22
  - Alignment 23
  - Assessing Customer Value 25
- 2 Explain How to Apply SC&O Strategy Process and Content 26
  - Hoshin Kanri Strategic Planning 27
  - SC&O Strategy Content 27
- 3 Supply Chain Strategy 30

- Changes in Strategy 30
- Types of Relationships 31
- 4 Execute Strategy 32**
  - Aligning Strategic Levels 32
  - Aligning Incentives 33
  - Focusing on Process 34
- 5 Understand and Apply Strategic Metrics and Measurements 36**
  - Correct Strategic Behavior 36
  - Actionable and Predictive Metrics 36
  - Commonly Used Supply Chain Metrics 37
  - Systems Thinking 37
- 6 Describe the Changing Strategic Environment 38**
  - Analytics 38
  - Globalization 38
  - Sustainability 39
  - Innovation 40
- Summary 43 ● Key Terms 44 ● Integrative Learning
- Exercise 44 ● Integrative Experiential Exercise 45 ● Discussion
- Questions 45
- Case: Zara 46

**2 Innovating Supply Chain and Operations 47**

**Chapter 3 Product and Process Design and Mapping 48**

- 1 Understand and Explain the Steps of Process Design 49**
  - Processes and Extended Processes 49
  - Process Choice 50
  - The Process Continuum 51
  - Break-Even Analysis 54
  - SOLVED PROBLEM 3.1 > Using Break-Even Analysis to Evaluate an Investment in Processes and Equipment 55**
- 2 Understand and Explain the Steps of Process Mapping and Layout Planning 56**
  - Extended Process Maps for Supply Chains 57
  - Hybrid Layouts 57
  - Line Balancing 61
  - SOLVED PROBLEM 3.2 > Line Balancing in Action 62**
  - Designing Functional Layouts 65
  - SOLVED PROBLEM 3.3 > Load-Distance Model in Action 66**
  - SOLVED PROBLEM 3.4 > Muther's Grid in Action 68**
- 3 Illustrate the Different Elements of Product Design 69**
  - Product Life Cycle 70
  - Research and Development 71
  - Product Design Process 71
- 4 Understand and Employ Quality Function Deployment 74**
  - Concurrent Design Teams 75
  - Design for Manufacture Method 75
  - Design for Maintainability 76
  - Designing for Reliability 77
  - SOLVED PROBLEM 3.5 > Series Reliability 79**

**SOLVED PROBLEM 3.6** > Reliability Measurement Failure Rates 79

**SOLVED PROBLEM 3.7** > System Availability 80

**5 Apply Green Design to Your Process and Product Design 81**

Design for Reuse 81

Other Green Design Concepts 81

Summary 82 ● Key Terms 83 ● Integrative Learning

Exercise 83 ● Integrative Experiential Exercise 84 ● Discussion

Questions 84 ● Solved Problems 84 ● Problems 87

● Case: Hamilton Electronics 90

## Chapter 4 Service Design 92

**1 Understand the Relationships between Services and Tangibles 93**

**2 Identify and Apply the Key Elements of Service Design 94**

Designing for Service Quality 95

Designing for Service Recovery 96

B2B versus B2C Services 96

Customer-Interactive Processes 97

Offerings and Experiences 97

**3 Understand and Apply the Process Chain Network (PCN) Tool for Service Design 98**

Process Chain Networks 99

Process Positioning 100

Three Process Principles 101

Steps in Developing a PCN Diagram 102

**SOLVED PROBLEM 4.1** > PCN Diagrams in Action 102

**4 Describe and Use the Planning Service Capacity for Uncertain Demand 103**

Capacity Components 103

Capacity Planning Tools 105

**SOLVED PROBLEM 4.2** > The Newsvendor Problem in Action 106

**5 Apply Queuing Theory 107**

Queuing Psychology 107

Queue Systems and Service Stations 107

Wait Times 108

**SOLVED PROBLEM 4.3** > Model I in Action for a Single-Phase Queue with a Single Server and Exponential Service Times 110

**SOLVED PROBLEM 4.4** > Model II in Action for a Single-Phase Queue with a Single Server and Constant Service Times 110

**SOLVED PROBLEM 4.5** > Model III in Action for a Multiserver System with Exponential Service Times 111

Summary 113 ● Key Terms 114 ● Integrative Learning

Exercise 114 ● Integrative Experiential Exercise 114 ● Discussion

Questions 114 ● Solved Problems 115 ● Problems 116

● Case: XLG Enterprises 118

## Chapter 5 Customer Relationship Management 120

**1 Understand and Apply Customer Relationships and Systems 121**

Customer Relationship Management Systems 122

Customer Relationships 123

CRM Processes 126

- 2 Learn the Techniques to Improve Customer Service 127**
  - Understanding and Meeting Customer Expectations 127
  - Providing Fail-Safe Services 128
  - Providing Service Guarantees 128
  - Measuring Service Performance 129
  - Managing Customer Complaints 131
  - SOLVED PROBLEM 5.1 > Net Promoter Scores in Action 131**
  - Recovering from Service Failures 132
- 3 Change Relationships through Servitization 134**
- 4 Manage Service Supply Chains 135**
- Summary 137 ● Key Terms 138 ● Integrative Learning Exercise 138 ● Integrative Experiential Exercise 138 ● Discussion Questions 138 ● Solved Problem 139 ● Problems 139
- Case: Can CRM Help a New Start-Up Business? 140

## 3

## Impacting Supply Chain and Operations Performance

141

## Chapter 6 Strategic Sourcing 142

- 1 Understand the Origins of the Purchasing Profession 144**
- 2 Describe the Effect of Strategic Sourcing on a Firm 145**
  - Reducing the Cost of Purchased Products and Services 145
  - SOLVED PROBLEM 6.1 > Economics of Purchasing 146**
  - The Quality of Purchased Goods and Services 147
  - Cost of Development and Design 148
- 3 Apply the Portfolio Approach to Strategic Sourcing 149**
  - Category Segmentation 149
  - Routine Items 151
  - Leverage Items 151
  - Bottleneck Items 152
  - Critical Items 152
- 4 Master the Tools of Strategic Cost Management 152**
  - Spend Analysis 153
  - Price Analysis 154
  - SOLVED PROBLEM 6.2 > Price Analysis in Action 154**
  - Cost Analysis 155
  - Total Cost of Ownership Analysis 155
  - SOLVED PROBLEM 6.3 > Total Cost of Ownership 156**
  - Total Cost of Ownership and Outsourcing Decisions 158
  - SOLVED PROBLEM 6.4 > Total Cost of Ownership and Outsourcing 158**
- Summary 159 ● Key Terms 160 ● Integrative Learning Exercise 160 ● Integrative Experiential Exercise 160 ● Discussion Questions 160 ● Solved Problems 161 ● Problems 163
- Case: Hazelton Industries 164

## Chapter 7 Supplier Management 166

- 1 Understand the Importance of Identifying and Applying the Correct Specification for Materials, Services, and Type of Business Relationship 168**

- Identifying the Need for Materials 168
- Identifying the Need for Services 169
- Identifying the Need for a Type of Relationship 169
- 2 Make Informed Supplier Selection Decisions 171**
  - Identifying Supplier Requirements with Weighted-Factor Analysis 172
    - SOLVED PROBLEM 7.1** > Creating a Weighted-Factor Analysis 174
  - Searching for Potential Suppliers 175
  - Supplier Evaluation 176
    - SOLVED PROBLEM 7.2** > Supplier Evaluation Using Weighted-Factor Analysis 176
  - Negotiating the Agreement 178
- 3 Create and Develop Constructive Supplier Relationships 179**
  - Identifying Suppliers to Develop 179
  - Forming a Cross-Functional Team 180
  - Involving Top Management 180
  - Identifying Opportunities 180
  - Defining Key Metrics and Cost Sharing 181
  - Agreeing on Projects and Resources 181
  - Monitoring Status and Modifying 181
- 4 Provide Constructive Supplier Feedback 183**
  - Designing and Implementing the Supplier Scorecard 183
    - SOLVED PROBLEM 7.3** > Supplier Scorecard Design 184
  - Delivery and Cost Assessment 186
  - Supplier Awards 187
- Summary 188 ● Key Terms 189 ● Integrative Learning Exercise 189 ● Integrative Experiential Exercise 189 ● Discussion Questions 189 ● Solved Problems 190 ● Problems 191
- Case: Rockhurst Company 194

## Chapter 8 Demand Management and Forecasting 195

- 1 Apply the Fundamentals of Demand Management 197**
- 2 Understand and Apply Time Series Forecasting 200**
  - Components of a Time Series 200
  - Forecasting and Bullwhips 201
  - Types of Forecasting Models 202
  - Judgmental or Experiential Forecasting 202
- 3 Understand and Apply Naive Forecasting Methods 205**
  - Simple Moving Average 205
    - SOLVED PROBLEM 8.1** > Using the Moving Average 205
  - Weighted Moving Average 206
    - SOLVED PROBLEM 8.2** > Weighted Moving Average 206
  - Single Exponential Smoothing 207
    - SOLVED PROBLEM 8.3** > Single Exponential Smoothing 208
  - Double Exponential Smoothing 209
    - SOLVED PROBLEM 8.4** > Double Exponential Smoothing 209
  - Measures of Forecasting Error 210
    - SOLVED PROBLEM 8.5** > Measures of Forecasting Error 211
- 4 Understand and Apply Time Series Forecasting Using Regression 212**
  - Time Series Forecasts Using Simple Linear Regression 213
    - SOLVED PROBLEM 8.6** > Using Simple Linear Regression 214

Linear Regression with Seasonality 216  
 SOLVED PROBLEM 8.7 > Deseasonalizing a Time Series 218  
 Econometric and Multiple Regression Models 222

Summary 226 ● Key Terms 227 ● Integrative Learning  
 Exercise 227 ● Integrative Experiential Exercise 227 ● Discussion  
 Questions 227 ● Solved Problems 228 ● Problems 234

● Case: Demand Planning at BIOCNG 241

## Chapter 9 Inventory Management Fundamentals and Independent Demand 242

### 1 Define the Roles and Types of Inventory 243

The Role of Inventory 243  
 Types of Inventory 245

### 2 Understand Important Inventory Concepts 247

Inventory Velocity 247  
 SOLVED PROBLEM 9.1 > Computing Inventory Turnover 247  
 Consignment Inventory 248  
 Vendor-Managed Inventory 249  
 Inventory and Bullwhips 249

### 3 Understand, Perform, and Apply Demand Analysis 250

Dependent versus Independent Demand 250  
 ABC Analysis 250  
 SOLVED PROBLEM 9.2 > Performing ABC Inventory Analysis 251  
 Review Systems 254

### 4 Explain and Apply Inventory Models 256

The Basic Economic Order Quantity Model 256  
 SOLVED PROBLEM 9.3 > Total Annualized Inventory Costs 256  
 SOLVED PROBLEM 9.4 > The Economic Order Quantity in Action 257  
 Quantity Discounts 258  
 SOLVED PROBLEM 9.5 > Using EOQ with Quantity Discounts 259  
 Reorder Points 260  
 SOLVED PROBLEM 9.6 > Computing a Reorder Point with Deterministic Lead Time 260  
 SOLVED PROBLEM 9.7 > Reorder Point with Stochastic Demand during Lead Time 261  
 Periodic Review Inventory Models 262  
 A Finite Replenishment Rate Inventory Model 262  
 SOLVED PROBLEM 9.8 > Using the Periodic Review Inventory Model 262  
 A Finite Replenishment Rate Inventory Model 262  
 SOLVED PROBLEM 9.9 > Using the Finite Replenishment Rate Model 263

Summary 264 ● Key Terms 265 ● Integrative Learning  
 Exercise 265 ● Integrative Experiential Exercise 265 ● Discussion  
 Questions 266 ● Solved Problems 266 ● Problems 269

● Case: Managing Inventory at Nordstrom 272

## Chapter 10 Sales and Operations Planning and Enterprise Resource Planning 273

### 1 Apply Sales and Operations Planning 274

Production Planning 275  
 Performing Sales and Operations Planning 277

**SOLVED PROBLEM 10.1** > A Chase Plan in Action 278

**SOLVED PROBLEM 10.2** > A Level Plan in Action 279

**2 Define and Explain How Capacity Functions in Operations Management 281**

Bottlenecks 282

Best Operating Level 282

**3 Understand and Apply Capacity Planning 283**

Capacity Planning Process 284

Modeling Capacity 285

**SOLVED PROBLEM 10.3** > Modeling Capacity Measures 286

**SOLVED PROBLEM 10.4** > Rough-Cut Capacity Planning in Action 286

Rough-Cut Capacity Planning 286

**4 Understand the Main Functionality of an Enterprise Resource Planning System 287**

**5 Understand and Apply Material Requirements Management 288**

MRP Inputs 288

MRP Record 290

**SOLVED PROBLEM 10.5** > MRP Record Computations 290

MRP Logic 291

**SOLVED PROBLEM 10.6** > Rolling Cart MRP Logic 292

MRP Outputs 294

Summary 295 ● Key Terms 296 ● Integrative Learning Exercise 296 ● Integrative Experiential Exercise 296 ● Discussion Questions 296 ● Solved Problems 297 ● Problems 301

● Case: Montclair State University 303

## Chapter 11 Logistics 305

**1 Understand the Strategic Importance of Logistics 306**

Cost 307

Flow 308

Access 309

Sustainability 310

**2 Understand and Apply Fundamental Logistics Trade-Offs 312**

Cost-to-Cost Trade-Offs 312

**SOLVED PROBLEM 11.1** > Cost-to-Cost Trade-Off Calculations 312

Modal Trade-Offs 312

Cost-to-Service Trade-Offs 313

Landed Cost 313

**SOLVED PROBLEM 11.2** > Landed Cost Trade-Off Calculations 314

**3 List and Apply the Five Logistics Processes 315**

Demand Processing 315

Inventory Management 317

Transportation 318

Warehousing 320

**SOLVED PROBLEM 11.3** > Warehousing Square Root Rule in Action 321

**SOLVED PROBLEM 11.4** > Weighted Center of Gravity in Action 323

Transportation Method 323

**SOLVED PROBLEM 11.5** > The Transportation Method in Action 324

Configuring Logistics 326

Structural Network 329

Reverse Logistics 329

- Summary 330 ● Key Terms 330 ● Integrative Learning
- Exercise 330 ● Integrative Experiential Exercise 331 ● Discussion
- Questions 331 ● Solved Problems 331 ● Problems 333
- Case: Brentward Logistics 336

## 4 Improving Supply Chain and Operations Management Performance 339

### Chapter 12 Project Management 340

- 1 Understand Project Management 341**
    - The Human Element in Projects 342
    - Qualifying Projects 346
    - Project Charters 348
    - SOLVED PROBLEM 12.1** > Project Charters in Action 350
  - 2 Utilize Project Planning Tools 350**
    - Estimating Task Completion Times 350
    - SOLVED PROBLEM 12.2** > Computing Task Times 352
    - SOLVED PROBLEM 12.3** > Computing Task Variance 352
    - SOLVED PROBLEM 12.4** > Putting It Together: Task Times and Variances 353
    - Managing Multiple Projects 354
  - 3 Plan and Control Projects Using PERT/CPM 355**
    - SOLVED PROBLEM 12.5** > Drawing AON Networks 356
    - Finding the Critical Path 356
    - Computing Early Times 357
    - Computing Late Times 358
    - Computing Slack and the Critical Path 358
    - SOLVED PROBLEM 12.6** > Finding the Critical Path 360
    - Using PERT/CPM in Delegation Decisions 361
    - Probabilistic PERT 361
    - SOLVED PROBLEM 12.7** > Computing Required Project Completion Times 364
    - SOLVED PROBLEM 12.8** > The Other Side of the Coin: Determining the Probability of Completing a Project in a Given Time 365
  - 4 Learn How to Manage Costs of Projects through Gantt Charts 366**
    - Managing Costs and Expediting Projects 366
    - Expediting or Crashing Tasks 368
    - SOLVED PROBLEM 12.9** > Crashing Projects 369
- Summary 370 ● Key Terms 371 ● Integrative Learning
- Exercise 371 ● Integrative Experiential Exercise 371 ● Discussion
- Questions 371 ● Solved Problems 372 ● Problems 377
- Case: Getting the Ducks in a Row for Project Management 380

### Chapter 13 Supply Chain Quality Management 381

- 1 Understand the Importance of Product Quality Dimensions 382**
- 2 Discuss the Basics of Quality Management as Espoused by Deming, Juran, Crosby, and Ishikawa 384**
  - W. Edwards Deming 384
  - Joseph Juran 385

Philip Crosby 387  
 Kaoru Ishikawa 387

**3 Understand Supply Chain Quality Management 387**

Forming Collaborative Relationships 389  
 ISO 9000 and Industry-Specific Standards 389

**4 Understand and Apply Quality in Services 390**

Service Quality Dimensions 391  
 SERVQUAL 391

**SOLVED PROBLEM 13.1** > SERVQUAL “Minding the Gap” Exercise 393

Customer-Driven Excellence 393

**5 Understand and Apply Quality Tools and Approaches 394**

Seven Basic Quality Tools 394  
 The Malcolm Baldrige National Quality Award (MBNQA) 400  
 Benchmarking 401

Summary 403 ● Key Terms 404 ● Integrative Learning  
 Exercise 404 ● Integrative Experiential Exercise 404 ● Discussion  
 Questions 405 ● Solved Problems 405 ● Problems 406

● Case: Corporate Universities: Teaching the Tools of Quality 407

**Chapter 14 Statistical Process Control 409**

**1 Articulate the Purposes of Statistical Quality Control and Statistical Thinking 410**

**2 Understand Process Stability 412**

Sampling and Inspection 413  
 Types of Samples 413  
 Inspection Methods 413

**SOLVED PROBLEM 14.1** > Computing Inspection Ratios 415

**3 Explain and Use Variables and Attributes Process Control Charts 415**

Understanding Control Charts 416  
 A Generalized Procedure for Developing Process Charts 418  
 Variables Control Charts 418

**SOLVED PROBLEM 14.2** > Developing Charts 422

**SOLVED PROBLEM 14.3** > Using Excel to Develop  $\bar{X}$  Control Charts 423

**SOLVED PROBLEM 14.4** > Developing  $R$  Charts 425

# Preface

## NEW TO THIS EDITION

With this edition of *Managing Supply Chain and Operations: An Integrative Approach*, we wanted to up our game. Every new edition of a textbook must represent a step forward. We feel like we met that goal with this edition. At the same time, you will see that this edition maintains the strengths of the first edition with additional features.

### Series Reliability

**Problem:** Your manager has asked you to compute reliability for the following system.

**Solution:** The overall reliability for this system is

$$R = 0.98 \times 0.99 \times 0.90 \times 0.97 = 0.847$$

< SOLVED PROBLEM 3.5

- **Analytics Emphasis** We have added analytics to the core model in the book. We have also honed our focus on analytics. For every quantitative example in the text, we have added analytics icons to show students that they are learning tools they can use in their careers. We have also included discussion of the importance of analytics in the early parts of the book.

- **Cutting Edge** Almost all of the vignettes and examples in the book have been updated. For example, the forecast section includes discussion of the work being done to use social media to forecast trends and preferences. New supply chain and operations vignettes are used to amplify and contextualize the techniques and tools taught in the book. More up-to-date information is provided on our *Managing Supply Chain and Operations* Facebook page, including all source articles for every vignette in the text.

### Is Big Data the Key to Better Forecasting?

As you will see in this chapter, a lot of forecasting requires the gathering of historical data, which can be time consuming to gather and to analyze. However, data is everywhere; it comes from social media, search engines, and online retailing. Can this data provide a key to predicting the future? Giselle Guzman thinks it can. She is the founder of Now-Cast Data Corp, a company that uses big data and crowdsourcing to help create financial forecasts and trends.

For example, Now-Cast<sup>1</sup> has found that by scrubbing data on prices from online sources, it can predict inflation much more quickly than the U.S. government can. By monitoring searches on the word *inflation*, it can better gauge consumer expectations and worries relative to price increases.

Giselle has worked closely with eminent researchers in forecasting such as Nobel Laureates Joseph Stiglitz and Lawrence Klein. She believes that there is wisdom in crowds and that their data can be explored and analyzed on a moment-by-moment basis. Analytics can be used to monitor this data, but external variables, such as terrorism or natural disasters, can also be followed to adjust expectations. Next, machine learning can be used to improve forecasting.

While the jury is still out concerning the use of big data in forecasting, it is intriguing to think that this data may be useful in predicting trends like future spending and demand. In this chapter, we introduce you to forecasting methods that use data as a foundation for decision making in firms. We'll return to Now-Cast at the chapter's end.

<sup>1</sup>Pisani, B., "Finding a Better Way to Do Economic Forecasting," CNBC, 24 Mar. 2016.

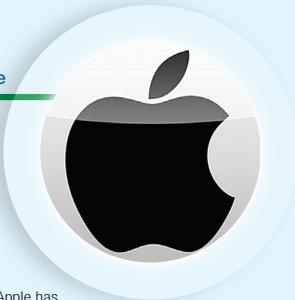

**Supply Chain and Operational Social Responsibility at Apple**

As you will learn in this class, supply chain managers concern themselves daily with social responsibility. This involves being sensitive to the rights and dignity of individuals in the global supply chain and putting systems and reporting in place to ensure compliance with company standards in this area. Apple currently has more than 1.6 million people working its supply chain. To manage in a way that is responsive to the needs of all these people is a big job.

To help with managing supply chain and operations social responsibility, Apple has established a supplier code of conduct. The Apple supplier code of conduct addresses safety, working conditions, fair employee treatment, and environmental performance. This requires more than just satisfying local laws. It means meeting world-class requirements for global supply chain practices.

In this chapter, we will introduce supply chain and operations. As a supply chain and operations manager, you will have an opportunity to make the world a better place. We will revisit social responsibility at Apple later in the chapter.

Source: Supplier Responsibility 2016 Progress Report, Apple Corporation, 2016.

- **Streamlined** We have analyzed areas where the first edition could be simplified and have done so for this second edition. This has reduced the number of pages while still providing the same outstanding content coverage. We believe that students will find the text readable.

- **Increased Coverage of Sustainability and Social Responsibility** We have made an effort to increase our discussion of these important topics that resonate with students. This will make your course more relevant for your students.

## SOLVING TEACHING AND LEARNING CHALLENGES

The second edition of *Managing Supply Chain and Operations* is targeted toward undergraduate- and graduate-level operations management courses that link to supply chain management in an effective and meaningful way. When we implemented this approach at our own university, we saw a tenfold increase in student enrollment in our major. Students are responding to the global nature of business, which has led to a realization that firms do not act alone to produce products and services. Although it may sound like a cliché, supply chains do compete against other supply chains. This text benefits from the fact that the authors have taught at both research and teaching universities such as Brigham Young, Florida State, Boise State, and Georgia Southern.

This book takes a balanced approach and, although rigorous, is not solely focused on quantitative material. We approach the quantitative material from a managerial perspective,

answering the question: “Where does the analytical tool fit into a supply chain and operations (SC&O) management system?” We also recognize that most students in introductory operations courses are not operations or supply chain management majors. Because this course is often a service course, our approach will help students understand how and why this subject area applies to their roles as future managers.

A second motivation for our writing this book emerges from the field. The field of SC&O management has developed from the three academic disciplines of purchasing, logistics, and operations. Faculty members who are coming from these differing fields do not always see the world the same way, which has created some fragmentation within the course. By putting together a world-class team from these three different academic traditions, we have developed the integrative model for SC&O management that brings these areas together. This model presents the glue that integrates these areas to provide a robust and complete textbook for students. Following are other teaching features in the text:

**CHAPTER OUTLINE AND LEARNING OBJECTIVES**

- 1 Understand the Relationships between Services and Tangibles**
  - Identify How Services and Nonservices Differ
- 2 Identify and Apply the Key Elements of Service Design**
  - Describe how managers design for service quality.
  - Explain how managers and designers design products for service recovery.
  - Explain the differences between business-to-consumer (B2C) and business-to-business (B2B) services.
  - Describe customer-interactive services and the components of the customer experience.
- 3 Understand and Apply the Process Chain Network (PCN) Tool for Service Design**
  - Understand process chain networks.
- 4 Describe and Use the Planning Service Capacity for Uncertain Demand**
  - Explain process positioning.
  - List the three process principles.
  - List and use the steps in developing a PCN diagram.
- 5 Apply Queuing Theory**
  - Understand queuing psychology.
  - Apply analytic queuing models to improve service performance.

- Each chapter has a defined set of **Learning Objectives**. Because AACSB is requiring faculty to identify learning objectives, we provide them as an aid for faculty and students.

- **Managing Across Majors** boxes directly address how students in different majors and disciplines will use SC&O concepts upon graduation. Making a clear connection between the concepts and how students will use them reinforces the importance and relevance of these concepts.

**Managing Across Majors 4.1** Marketing majors, remember that service operations need information from marketing to help identify and understand customer needs.

At the beginning of this chapter, we discussed music-sharing services such as Spotify. After studying service design, you now understand that these companies have created a coproductive environment where customers provide information and preferences. As you use the music-sharing service, you actually help to fine-tune the service the company provides to you.

There are also traditional quality dimensions to this service, such as performance, reliability, cost, and content. The social dimension takes the experience from being primarily technological to relational.

Customers of music-sharing services also prefer paid music. This eliminates commercials and makes the experience less clunky. In addition, socially engaged listeners are much more satisfied than passive listeners. That is, as a listener, you join a community by sharing and borrowing. Also, exclusive content drives users to the service. For example, if one service has Taylor Swift and another doesn't, her fans will flock to the service providing her music.

Data analysis and algorithms allow services to provide music that matches your moods. The social aspect creates an environment not unlike hanging around at a really awesome music shop with your friends. So the next time you chat with your friends about music sharing, explain about providing customer inputs to processes and coproduction.

- **Opening Vignettes** introduce a problem or scenario that an actual company has encountered. At the end of the chapter, we discuss how that company used concepts from the chapter to address its needs. **End-of-Chapter Vignettes** also require assessment and application. These exercises provide students with the skills they will need when they become managers.

- Each chapter spotlights current events and ties them directly to the chapter's concepts. Students see how managers apply the information they are learning in the field. Every chapter has multiple **SC&O Current Events** boxes that make the material relevant to the students.

#### SCOR at Ford

A good example of a company that used SCOR to become more effective is Ford Motor Company. The parts, supply, and logistics division of Ford used SCOR to improve its forecasting, inventory planning, electronic supplier communication, and management. Ford's

extremely complex supply chain contains thousands of parts, thousands of suppliers, and millions of end consumers. Although Ford's functional areas within purchasing and logistics were individually effective, they were not structured to make integrated supply chain decisions. Ford identified the problems in its as-is state and then used SCOR to map and describe important inventory processes that flowed through the functional silos. Understanding how these processes affected each area of the company helped employees understand the holistic nature of their siloed decisions. Ford managers used SCOR to measure and benchmark these processes against others doing similar processes. Ford was then able to standardize processes and help each business area understand its responsibility for the entire process.

Ford has benefited substantially from using SCOR. Ford's recurring inventory has been greatly reduced due to attention to variation in inventory policies. Focusing on customer requirements has led to a 20 percent reduction in open back orders, improved customer satisfaction, and a 25 percent reduction in forecast inaccuracies. Because employees are focused on the total process rather than their own silo, Ford has reduced total inventory cycle time by 30 percent. Ford's return on investment was calculated to be five times the cost of implementing the SCOR system.

#### Managing Flow for Fast Fashion

We discussed Zara from a strategic perspective in Chapter 2. We now discuss it from a logistics perspective. Zara, the Spanish fast-fashion retailer, uses logistics to ensure that the most recent fashion trends are on store shelves quickly. The secret to Zara's business strategy is the quick turnover of product lines within retail stores. In fact, Zara frequently stocks its shelves with fashion apparel that was displayed on fashion runways only three weeks earlier.

So how does Zara accomplish this fast-fashion supply chain? Zara has created a very cohesive logistics strategy between its factory operations and its retail stores. Zara creates clothing using just-in-time manufacturing and small batch sizes. Zara then ships these batches to retail stores to see what customers prefer. When Zara is informed about what is selling, not selling, or not available at retail stores, the factory produces what customers value most. The factory then uses its excess capacity and agile capabilities to manufacture the most popular styles.

Zara's commitment to a fast and steady tempo paced by order fulfillment to stores allows Zara to keep minimal inventory while still meeting customers' needs. Logisticians for Zara know that it delivers twice weekly from the factories in Bangladesh to the central distribution center in Spain. The shipments are then broken up and delivered to stores, usually in less than 24 hours to European stores and 40 hours to U.S. stores. The logistics costs of rapidly shipping inventory to stores are much more expensive than traditional, slower fashion

- **Global Connections** boxes focus on how SC&O management ties together supply chains across international boundaries. Learning how managers can use global supply chains and how international linkages benefit firms provides students an advantage once they enter the workforce.

- **Using Technology** boxes walk students through the ways managers use technology to solve SC&O problems in the workplace. Step-by-step tutorials break down problems and solutions and provide computer-based fundamentals for SC&O problem solving.

You can also use Excel to apply newsvendor analysis to Solved Problem 4.2.

**SOLVED PROBLEM 4.2 >**

MyLab Operations Management  
Video

**The Newsvendor Problem in Action**

**Problem:** In service environments, an inventory issue is capacity. Service operations have a capacity for meeting customer demand according to how they are designed. If there is not enough capacity, customer demand may not turn into sales. Excess capacity comes with a cost as well.

For example, a restaurant chain is opening a new location in a business district. The question is how many tables to design in the restaurant. The key revenue period is the weekday lunch seating, so the restaurant desires to plan capacity for that demand. Lunchtime demand is forecast to be normally distributed with a mean of 25 parties and a standard deviation of 5 parties. (Assume one party per table.) How many tables should the restaurant have?

A naive view would have 25 tables, but that ignores the asymmetric cost structure. The average party spends \$40 for lunch, with ingredient costs being 25 percent of that amount.

**Solution:** Therefore, the cost of insufficient tables ( $C_u$ ) is  $40 - ((40 \times 0.25) = \$30$  per table, which is the average profit contribution per party. Each table takes up 100 square feet of space, and space costs \$3 per square foot per month (approximately \$0.10 per square foot per day).

Therefore, the cost of an extra table is  $100 \times 0.10 = \$10$  per table per day. This cost suggests that an optimal number of tables would have  $CF = 30 / (10 + 30) = 0.75$ , or 75 percent of the cumulative distribution. Looking up 0.75 in the normal cumulative distribution table (see Appendix Table A-2) shows that  $z = 0.675$ . Therefore, the optimal number of tables is  $25 + (0.675 \times 5) = 28.375$ , or approximately 28 tables. See **FIGURE 4.5** for the formulas and a sample layout for a newsvendor problem.

- The text includes videos in MyLab Operations Management for over 70 **Solved Problems** from the text, allowing students to practice quantitative material prior to coming to class.

## End-of-Chapter Resources

**Summary**

- The chapter began by reviewing the importance of tangibles in services.
  - All services involve a bundling of tangibles and intangibles.
  - Both the tangibles and intangibles have to be correct.
- We then discussed the key elements of a service design.
  - An important aspect of service design is that customers provide in This aspect is a major distinction between services and manufacturing. B2B and B2C services differ in that the entities are different.
- We followed our service design discussion with details of the process (PCN) diagram.
  - PCN diagrams provide a basis for process positioning, that is, determine how processes interact with customers and suppliers.

**Integrative Learning Exercise**

Identify an organization, company, or business that provides a service. Use a process chain network (PCN) to evaluate the interactions between service providers and customers for the organization. Be sure to identify

**Integrative Experiential Exercise**

Together with a student group, visit a business or organization that provides a service. Identify a process or process segment in the business or organization that can be analyzed using a PCN diagram. Identify the process level, the process entities, and the beginning and ending steps of the process

**Discussion Questions**

- Briefly describe service operations and service.
- In what ways do services involve tangible elements?
- How does a service process differ from a manufacturing process?
- How does a service process differ from a manufacturing process?
- How does a service process differ from a manufacturing process?
- How does a service process differ from a manufacturing process?
- How does a service process differ from a manufacturing process?
- How does a service process differ from a manufacturing process?
- How does a service process differ from a manufacturing process?
- How does a service process differ from a manufacturing process?

**Problems**

**Planning Service Capacity for Uncertain Demand**

**NEWSVENDOR PROBLEMS**

- A local bookstand believes that the demand for the Olympic edition of a sports magazine is normally distributed with a mean of 1,200 and a standard deviation of 200. Each copy of the magazine costs the bookstand \$1.50 per copy, and the bookstand sells the magazine for \$5.00. Following the demand for the magazine, the bookstand must decide whether to recycle because the demand for the magazine is uncertain. Determine the optimal number of copies of the magazine that the bookstand should order.
- The demand for news magazines is assumed to be normally distributed with a mean of 500 and a standard deviation of 100. Each copy of the magazine costs the bookstore \$1.50. Any unsold copies will be discounted to 50% of the full price. Determine the number of copies that the bookstore should order each day to maximize its expected profit.
- A retail store must decide how many copies of a special release of a political thriller to order. The demand for the book is assumed to be normally distributed with a mean of 2,500 and a standard deviation of 150. The bookstore will sell the book for \$25. It costs the bookstore \$15 for each copy it stocks. There is no market for the book once the next book in the series is released; therefore, the book has no salvage value for unsold copies. How many copies of the book should the bookstore stock (order) if it wants to maximize its expected profit?

**Solved Problems**

**Planning Service Capacity for Uncertain Demand**

**CAPACITY PLANNING TOOLS**

**SOLVED PROBLEM 4.2**

- A bookstore must decide how many copies of a special release of a political thriller to order. The demand for the book is assumed to be normally distributed with a mean of 2,500 and a standard deviation of 150. The bookstore will sell the book for \$25. It costs the bookstore \$15 for each copy it stocks. There is no market for the book once the next book in the series is released; therefore, the book has no salvage value for unsold copies. How many copies of the book should the bookstore stock (order) if it wants to maximize its expected profit?

e. average time spent in the video store =  $W_t = \frac{L_q}{\lambda} = \frac{1.6667}{25} = 0.0667 \text{ hour} = 0.0667 \times 60 = 4 \text{ minutes}$

**SOLVED PROBLEM 4.4**

- A clothing store has a single machine that screens logos onto shirts. The time to screen on the logo is a constant 3 minutes. On average, there is a request for 10 screened shirts per hour. Compute the following:
  - average use of the machine
  - average number of shirts waiting to be screened
  - average time a shirt waits to be screened
  - average number of shirts waiting in the system
  - average time spent in the shirt-screening process

**CASE**

**XLG Enterprises**

Tommy Hernandez had recently been assigned to the service design team at XLG Enterprises. Tommy had been with XLG for a little over two years when the opportunity to join the service design team became available. The service design team performs a variety of roles, one of which is to analyze and recommend improvements for existing customer service operations performed at XLG.

The design team is now analyzing a new customer service process. The process would handle a variety of customer requests, including billing disputes, shipping and product delivery issues, and product returns. These activities would take place at a newly designed service facility close to the XLG headquarters. Most of XLG's customers are small to medium-sized businesses located in the same city as the proposed customer service facility. It is the hope of XLG management that the new central location for customer service will be a way to facilitate and expedite customer requests related to product billing, shipping, and returns. Customer orders would still be placed mostly over the telephone or the Internet. A sizable number of XLG customers would come to the customer service facility to pick up deliveries or to make returns. The facility would also handle customer-related issues concerning service and billing.

A stated goal of XLG management is that the facility should ensure that customers rarely have to wait more than 15 minutes before speaking to a service representative, even during the busiest of times. XLG anticipated that it would staff the new facility with two service representatives at all times. During the busiest times of the day, however, management recognizes that it might have to increase staffing to as many as six service representatives to meet its stated objectives.

Tommy has been asked to join the team that is designing the new facility. As part of his role, he is to conduct analysis of customer waiting times. Tommy has been given information related to expected customer arrival rates during the busiest service periods throughout the day, average service times, and costs related to both resource staffing and customer waiting. Here is a summary of the information given to Tommy:

Time Period	Arrival Rate
7 a.m.–1 p.m.	10 per hour
1 p.m.–5 p.m.	15 per hour
5 p.m.–10 p.m.	6 per hour

- **Summaries** review the important topics discussed in the chapter.
- **Key Terms** are listed for review purposes. Each list includes page references showing where the concept was first discussed in each chapter.
- **Integrative Learning Exercises** are designed to get students to integrate multiple concepts throughout the chapter.
- **Integrative Experiential Exercises** are designed to get students out into the real world by visiting companies and learning how supply chain and operations concepts are applied.
- **Discussion Questions** test student comprehension of the concepts presented.
- **Solved Problems** detail how to solve model problems using the techniques presented in the chapter.
- **Problems** sharpen students' skills by providing a wide selection of homework material.
- **Cases** challenge students to grapple with a problem. Each case can be used as an in-class exercise, a homework assignment, or a team project.

## M MYLAB OPERATIONS MANAGEMENT

### Reach Every Student by Pairing This Text with MyLab Operations Management

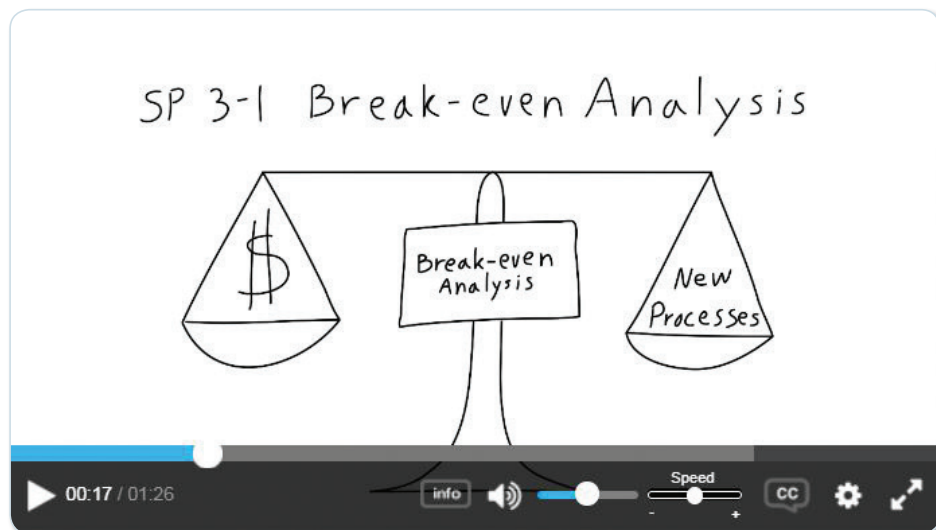

MyLab is the teaching and learning platform that empowers you to reach *every* student. By combining trusted author content with digital tools and a flexible platform, MyLab personalizes the learning experience and improves results for each student. Learn more about MyLab Operations Management at [www.pearson.com/mylab/operations-management](http://www.pearson.com/mylab/operations-management).

### Deliver Trusted Content

You deserve teaching materials that meet your own high standards for your course. That's why we partner with highly respected authors to develop interactive content and course-specific resources that you can trust—and that keep your students engaged.

This text is totally integrated with MyOMLab. Among the features that have proven popular are:

- **Over 80 videos.** Every solved example in the main body of every chapter has a video that shows step-by-step how to solve the problems. Students love this feature of the book. We believe that our videos are best-in-class. We used the talent of BYUtv to develop these videos.

- **Simulations** A series of simulations created by Pearson educational specialists are available for use in your SC&O course at various times. These make great team in-class activities that you can use to drive home key concepts and to make SC&O fun!

### Inventory Management

You are the store manager at a local branch of DigLife, a large electronics retail chain. A new version of a popular consumer electronics device called the Amulet is coming out this year. It is your job to sell as many Amulets as you can while minimizing your costs in order to maximize your store's profits.

**Your Goal** Earn \$1,000,000 in net profits of Amulet sales.

The simulation will take approximately 20 minutes after you select the first order and can be paused at any time. You will be able to run the simulation three times. Your score will be calculated based on how well you do relative to your goal.

**START INTRO** Skip Intro

### INVENTORY MANAGEMENT SIMULATION

Revenue Costs THIS MONTH THIS QUARTER YEAR TO DATE

Costs and Revenues will appear here as the simulation runs.

To start the simulation, review your documents and make an order decision

Inventory Units left: 0 Demand: 0 Please make a decision to begin.

Total Units Sold Total Revenue Total Costs

0 \$0 \$0

### Quality Management

**Your Situation** You are the manager of Cibare, one of the hottest Italian restaurants in town. You manage a full service staff and work closely with the Chef and the restaurant owner to ensure Cibare is providing a high-quality experience for customers. It is your job to make sure daily operations are running smoothly and that the investments you make to improve or maintain quality provides a return that exceeds the cost.

**Your Goal** Earn \$360,000 in net profits from food and beverage sales. Don't get fired!

The simulation will take approximately 20 minutes to complete and can be paused at any time.

**START INTRO** Skip Intro

### Step 1: Review Documents

Review Emails Text Messages

EVENTS

November 15-17 weeks Remaining

First, you will need to go through your incoming documents like reviews, emails and chats in order to familiarize yourself with the scenario specifics. Read these items carefully since they contain clues on how to best understand and solve problems. Be sure to check new information, which is indicated with a red alert!

**NEXT** Previous Skip Intro

- **Dynamic Study Modules** These are fantastic utilities that help tutor students on key SC&O concepts.

## MODULE CONTENT

QUESTIONS: 20

expand all collapse all

LINKED QUESTIONS

- ▶ The acquisition cost includes \_\_\_\_\_.
- ▶ The \_\_\_\_\_ includes all purchasing costs related to \_\_\_\_\_.

LINKED QUESTIONS

- ▶ In the new product development process, what is the second step?
- ▶ Business/technical assessment is the \_\_\_\_\_ step in the new \_\_\_\_\_.

LINKED QUESTIONS

- ▶ A bottleneck item is \_\_\_\_\_.
- ▶ A \_\_\_\_\_ is a purchased item with few alternate sources of \_\_\_\_\_.

- **E-text** Students can save money by utilizing the e-text and bypassing the need to have a paper text. Red Shelf and other tools are available to make this access very economical for the students. Just contact your Pearson rep to find out about this alternative. We do this at BYU and have saved our students a lot of money.

## Empower Each Learner

Each student learns at a different pace. Personalized learning pinpoints the precise areas where each student needs practice, giving all students the support they need—when and where they need it—to be successful.

## Teach Your Course Your Way

Your course is unique. Whether you'd like to build your own assignments, teach multiple sections, or set prerequisites, MyLab gives you the flexibility to easily create *your* course to fit *your* needs.

- You can create quizzes using prewritten editable questions from Tom Foster or you can create your own quizzes that students can complete either before, during, or after class.

## Improve Student Results

When you teach with MyLab, student performance improves. That's why instructors have chosen MyLab for over 15 years, touching the lives of over 50 million students.

## DEVELOPING EMPLOYABILITY SKILLS

This book is designed to provide a basic understanding of supply chain and operations management. For SC&O majors, this is a great platform for other, more advanced classes. For non-majors, in addition to other skills, they will be learning the basic concepts and important tools for managing:

- Logistics
- Purchasing
- Operations Management
- Inventory Management
- Project Management
- Process Management
- Process Improvement
- Six Sigma

This class will provide tools and concepts that you can use on the first day of your job. Pay attention. This is a growing field that is full of excitement and relevance for your future.

### Integrative Experiential Exercise

Together with a student group, visit a business or organization that provides a service. Identify a process or process segment in the business or organization that can be analyzed using a PCN diagram. Identify the process level, the process entities, and the beginning and ending steps of the process

segment. Be sure to identify the points where the customer receives benefits and the provider incurs costs. Comment on how moving and rearranging steps across and between process regions might affect the value proposition by increasing customer benefits, decreasing provider costs, or both.

### Discussion Questions

1. Briefly describe service operations and service.
2. In what ways do services involve tangible elements?
3. Identify the customer input resources and the service provider outputs for the following service operations: accounting, education, computer repair, and healthcare.
4. What is meant by simultaneity in services? What is a major consequence of simultaneity?
5. What are some long-term responses for increasing and decreasing service capacity?
6. What is meant by the term *time-perishable capacity* as it relates to service operations? Provide an example.
7. Customers are generally involved in the service delivery process. What are some negative consequences associated with customer interaction in the service operation?
8. Briefly define and describe how a process chain network (PCN) diagram can be used in designing service delivery systems.
9. How can you shift the focus of your operations using a PCN diagram?
10. What trade-offs are generally made when making capacity decisions?
11. How do capacity choices vary in the near and long terms?
12. How can queuing theory be used to help evaluate capacity decisions for service providers?
13. Queuing psychology identifies ways that service operations managers can improve waits by improving the perception of those customers who do wait. What are some of the fundamental points related to queuing psychology?
14. In waiting lines, sometimes technological advances cannot make it easier to manage queues. How can psychology help with this problem?
15. How does the newsvendor model allow service firms to evaluate capacity decisions?

## Expanding Your Career Skills or Building Your Career Skills

As educators and practitioners, we are aware of the changing landscape of the workplace and the needs of managers in various industries. This category of activities encourages students to research data, identify patterns and facts in data, take initiative, work in groups, and clearly communicate their findings to others.

## **I** NSTRUCTOR TEACHING RESOURCES

This program comes with the following teaching resources.

Supplements available to instructors at <a href="http://www.pearsonhighered.com">www.pearsonhighered.com</a>	Features of the Supplement
<b>Instructor's Resource Manual, authored by Khurram Bhutta from Ohio University</b>	<ul style="list-style-type: none"> <li>• Chapter-by-chapter summaries</li> <li>• A sample syllabus and course outline</li> <li>• Teaching tips</li> <li>• Examples and activities not in the main book</li> <li>• Class discussion questions</li> <li>• Video suggestions</li> </ul>
<b>Solutions Manual, authored by Mahesh Srinivasan from The University of Akron</b>	Solutions to all discussion questions, problems, and case questions
<b>Test Bank, authored by Mahesh Srinivasan from The University of Akron</b>	<p>More than 1,000 multiple-choice, true/false, short-answer, and graphing questions with these annotations:</p> <ul style="list-style-type: none"> <li>• Difficulty level (easy, moderate, difficult)</li> <li>• Type (multiple-choice, true/false, short-answer, essay)</li> <li>• Learning objective</li> <li>• AACSB learning standard (Written and Oral Communication; Ethical Understanding and Reasoning; Analytical Thinking; Information Technology; Interpersonal Relations and Teamwork; Diverse and Multicultural Work; Reflective Thinking; Application of Knowledge)</li> </ul>

<b>PowerPoints, authored by Scott Webb from Brigham Young University</b>	<p>Slides include all the figures, tables, and equations in the textbook. PowerPoints meet accessibility standards for students with disabilities. Features include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• Keyboard and screen reader access</li> <li>• Alternative text for images</li> <li>• High color contrast between background and foreground colors</li> </ul>

If assistance is needed, our dedicated technical support team is ready to help with the media supplements that accompany this text. Visit [support.pearson.com/getsupport](http://support.pearson.com/getsupport) for answers to frequently asked questions and toll-free user support phone numbers.

## A KNOWLEDGMENTS

We acknowledge the contributions of many in making this book a success, including graduate assistant support from Erik Chaston, Scott Merrell, Aaron Hefner, Aaron Lund, Heidi Hunsaker, and Brian Andersen. We also wish to thank Phillip Fry for his contributions. Past and current editors have been essential in providing vision, including Chuck Synovec, Donna Battista, and Dan Tylman. Especially, Deepa Chungi has been a wonderful support to this project.

Many outside reviewers have contributed to the quality of this text and include the following:

Nezih Altay, DePaul University  
 Kwasi Amoako, University of North Carolina  
 Antonio Arreola-Risa, Texas A&M University  
 Cliff Asay, University of Wyoming  
 Dan Ball, Monmouth University  
 Pamela Barnes, Kansas State University  
 Hooshang Beheshti, Radford University  
 Ednilson Bernardes, University of West Virginia  
 Khurram Bhutta, Ohio University  
 Greg Bier, University of Missouri  
 Terrence Boardman, East Carolina University  
 Leland Buddress, Portland State University  
 Dan Bumblauskas, University of Missouri  
 John Burbridge, Elon University  
 Paul Choi, California State University  
 Rich Coleman, Elon University  
 John Connolly, Latter-Day Saints Business College  
 Gordon Corzine, University of Massachusetts  
 Michael Fathi, Georgia Southwestern State University  
 John Gardner, Brigham Young University  
 Ray Gehani, The University of Akron  
 Wooseung Jang, University of Missouri  
 Amit Kakkad, University of San Diego  
 Peter Kelle, Louisiana State University  
 George Kenyon, Lamar University  
 Gregg Macaluso, University of Colorado

Alan Mackelprang, Georgia Southern University  
 Bill Maligie, California State University  
 Hilda Martinez, Clarkson University  
 Anthony Narsing, Macon State College  
 Roger Nibler, Portland State University  
 Glenn Pace, Missouri State University  
 Gertrude Pannirselvam, Southern Illinois University  
 Ali Parlakturk, University of North Carolina  
 Patrick Penfield, Syracuse University  
 Fred Raafat, San Diego State University  
 Ana Rosado Feger, Ohio University  
 Brooke Saladin, Wake Forest University  
 Michael Santonino, Bethune Cookman University  
 Mahesh Srinivasan, The University of Akron  
 Larry Taube, University of North Carolina  
 Paul Vanderspek, Colorado State University  
 Jerry Wei, University of Notre Dame  
 Marek Wermus, Old Dominion University  
 Angela Wicks, Bryant University  
 Kaitlin Wowak, University of Notre Dame  
 John Wu, California State University  
 Xiaohui Xu, California State Polytechnic University  
 Helio Yang, San Diego State University  
 Zach Zacharia, Lehigh University  
 Wenge Zhu, California State Polytechnic University

Finally, we are thankful for our faith that keeps us continually improving and progressing.
