# Contents

PREFACE ix  
 TO THE STUDENT xvii  
 ACKNOWLEDGMENTS xviii  
 INDEX OF APPLICATIONS xix

Parents' Income and Percentage of Children Who Attend College (pp. 1–2)

Percentages of American Adults Who Smoke (pp. 76–77)

U.S. Life Expectancies of Women and Men (pp. 121–122)

Year of Birth	Women (years)	Men (years)
1980	77.4	70.0
1985	78.2	71.1
1990	78.8	71.8
1995	78.9	72.5
2000	79.5	74.1
2005	79.9	74.9
2010	81.0	76.2
2014	81.2	76.4

## 1

### LINEAR EQUATIONS AND LINEAR FUNCTIONS 1

1.1 Using Qualitative Graphs to Describe Situations 1  
 1.2 Graphing Linear Equations 7  
 1.3 Slope of a Line 17  
 1.4 Meaning of Slope for Equations, Graphs, and Tables 27  
 1.5 Finding Linear Equations 37  
 1.6 Functions 45  
 CHAPTER SUMMARY 54  
 Key Points of Chapter 1 54  
 Chapter 1 Review Exercises 56  
 Chapter 1 Test 58

## 2

### MODELING WITH LINEAR FUNCTIONS 60

2.1 Using Lines to Model Data 60  
 2.2 Finding Equations of Linear Models 73  
 2.3 Function Notation and Making Predictions 82  
 2.4 Slope Is a Rate of Change 97  
 Taking It to the Lab: Climate Change Lab • Used-Car Lab • Golf Ball Lab • Walking Student Lab • Linear Lab: Topic of Your Choice 110  
 CHAPTER SUMMARY 116  
 Key Points of Chapter 2 116  
 Chapter 2 Review Exercises 118  
 Chapter 2 Test 119

## 3

### SYSTEMS OF LINEAR EQUATIONS AND SYSTEMS OF LINEAR INEQUALITIES 121

3.1 Using Graphs and Tables to Solve Systems 121  
 3.2 Using Substitution and Elimination to Solve Systems 132  
 3.3 Using Systems to Model Data 143  
 3.4 Value, Interest, and Mixture Problems 151  
 3.5 Using Linear Inequalities in One Variable to Make Predictions 163  
 3.6 Linear Inequalities in Two Variables; Systems of Linear Inequalities 175  
 Taking It to the Lab: Climate Change Lab (continued from Chapter 2) • Sports Lab • Truck Lab 184  
 CHAPTER SUMMARY 186  
 Key Points of Chapter 3 186

## Sample Preface. Not for Distribution.

Chapter 3 Review Exercises 188

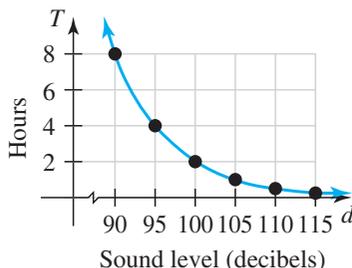

Chapter 3 Test 191

Cumulative Review of Chapters 1–3 192

## Average Ticket Prices to Major League Baseball Games (p. 222)

Year	Average Ticket Price (dollars)
1950	1.54
1960	1.96
1970	2.72
1980	4.45
1991	8.84
2000	16.22
2010	26.74
2015	28.94

## Safe Exposure Times to Music at Rock Concerts (pp. 297–298)

## Worldwide Vinyl Record Revenues (pp. 390–391)

Year	Revenue (millions of dollars)
2000	107
2002	64
2004	51
2006	36
2008	66
2010	87
2012	171
2014	347
2015	416

## 4

**EXPONENTIAL FUNCTIONS 195**

- 4.1 Properties of Exponents 195
- 4.2 Rational Exponents 208
- 4.3 Graphing Exponential Functions 214
- 4.4 Finding Equations of Exponential Functions 225
- 4.5 Using Exponential Functions to Model Data 233
- Taking It to the Lab: Stringed Instrument Lab • Cooling Water Lab • Exponential Lab: Topic of Your Choice 248
- CHAPTER SUMMARY 250
- Key Points of Chapter 4 250
- Chapter 4 Review Exercises 252
- Chapter 4 Test 254

## 5

**LOGARITHMIC FUNCTIONS 255**

- 5.1 Composite Functions 255
- 5.2 Inverse Functions 265
- 5.3 Logarithmic Functions 277
- 5.4 Properties of Logarithms 285
- 5.5 Using the Power Property with Exponential Models to Make Predictions 293
- 5.6 More Properties of Logarithms 303
- 5.7 Natural Logarithm 310
- Taking It to the Lab: China and India Populations Lab • Folding Paper Lab • Exponential/Logarithmic Lab: Topic of Your Choice 317
- CHAPTER SUMMARY 319
- Key Points of Chapter 5 319
- Chapter 5 Review Exercises 321
- Chapter 5 Test 323
- Cumulative Review of Chapters 1–5 324

## 6

**POLYNOMIAL FUNCTIONS 327**

- 6.1 Adding and Subtracting Polynomial Expressions and Functions 327
- 6.2 Multiplying Polynomial Expressions and Functions 338
- 6.3 Dividing Polynomials: Long Division and Synthetic Division 349
- 6.4 Factoring Trinomials of the Form  $x^2 + bx + c$ ; Factoring Out the GCF 357
- 6.5 Factoring Polynomials 366
- 6.6 Factoring Special Binomials; A Factoring Strategy 374
- 6.7 Using Factoring to Solve Polynomial Equations 379
- Taking It to the Lab: Climate Change Lab (continued from Chapter 3) • Projectile Lab 393
- CHAPTER SUMMARY 395
- Key Points of Chapter 6 395

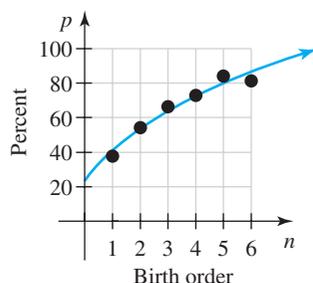

Average Per-Person  
Consumption of Bottled Water  
(pp. 449–450)

Year	Average Consumption (gallons per person)
2009	27.6
2010	28.3
2011	29.2
2012	30.8
2013	32.0
2014	34.1
2015	36.5

Numbers of Internet Users in  
the United States (p. 500)

Year	Number of Internet Users (millions)
2003	179.5
2006	206.0
2009	218.1
2012	249.6
2015	283.7

Percentages of Births “Despite  
Contraception” (p. 626)

## 7

**QUADRATIC FUNCTIONS 401**

- 7.1 Graphing Quadratic Functions in Vertex Form 401
  - 7.2 Graphing Quadratic Functions in Standard Form 413
  - 7.3 Using the Square Root Property to Solve Quadratic Equations 425
  - 7.4 Solving Quadratic Equations by Completing the Square 436
  - 7.5 Using the Quadratic Formula to Solve Quadratic Equations 443
  - 7.6 Solving Systems of Linear Equations in Three Variables; Finding Quadratic Functions 454
  - 7.7 Finding Quadratic Models 462
  - 7.8 Modeling with Quadratic Functions 469
- Taking It to the Lab: Climate Change Lab (continued from Chapter 6) • Projectile Lab (continued from Chapter 6) • Projectile Lab (Using a CBR or CBL) • Water Flow Lab • Quadratic Lab: Topic of Your Choice 480
- CHAPTER SUMMARY 483
- Key Points of Chapter 7 483
- Chapter 7 Review Exercises 486
- Chapter 7 Test 488
- Cumulative Review of Chapters 1–7 489

## 8

**RATIONAL FUNCTIONS 492**

- 8.1 Finding the Domains of Rational Functions and Simplifying Rational Expressions 492
  - 8.2 Multiplying and Dividing Rational Expressions; Converting Units 505
  - 8.3 Adding and Subtracting Rational Expressions 513
  - 8.4 Simplifying Complex Rational Expressions 524
  - 8.5 Solving Rational Equations 532
  - 8.6 Modeling with Rational Functions 541
  - 8.7 Variation 553
- Taking It to the Lab: Climate Change Lab (continued from Chapter 7) • Illumination Lab • Boyle’s Law Lab 568
- CHAPTER SUMMARY 570
- Key Points of Chapter 8 570
- Chapter 8 Review Exercises 573
- Chapter 8 Test 574

## 9

**RADICAL FUNCTIONS 576**

- 9.1 Simplifying Radical Expressions 576
  - 9.2 Adding, Subtracting, and Multiplying Radical Expressions 586
  - 9.3 Rationalizing Denominators and Simplifying Quotients of Radical Expressions 594
  - 9.4 Graphing and Combining Square Root Functions 601
  - 9.5 Solving Radical Equations 608
  - 9.6 Modeling with Square Root Functions 618
- Taking It to the Lab: Pendulum Lab 628

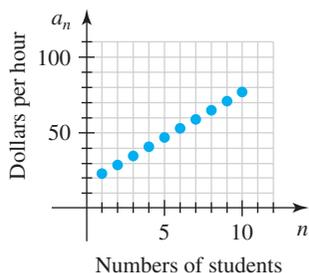

CHAPTER SUMMARY 628

Key Points of Chapter 9 628

Chapter 9 Review Exercises 631

Chapter 9 Test 632

Rates for Math Tutoring (p. 636)

## 10

**SEQUENCES AND SERIES 634**

10.1 Arithmetic Sequences 634

10.2 Geometric Sequences 641

10.3 Arithmetic Series 648

10.4 Geometric Series 653

Taking It to the Lab: Bouncing Ball Lab • Stacked Cups Lab 659

CHAPTER SUMMARY 660

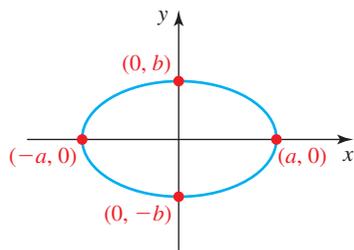

Key Points of Chapter 10 660

Chapter 10 Review Exercises 661

Chapter 10 Test 662

Cumulative Review of Chapters 1–10 663

Intercepts of an Ellipse (p. 688)

## 11

**ADDITIONAL TOPICS 666**

11.1 Absolute Value: Equations and Inequalities 666

Key Points of Section 11.1 672

11.2 Performing Operations with Complex Numbers 674

Key Points of Section 11.2 678

11.3 Pythagorean Theorem, Distance Formula, and Circles 679

Key Points of Section 11.3 683

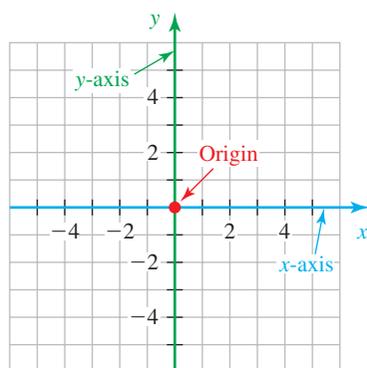

11.4 Ellipses and Hyperbolas 686

Key Points of Section 11.4 692

11.5 Solving Nonlinear Systems of Equations 694

Key Points of Section 11.5 698

Coordinate system (p. 700)

## A

**REVIEWING PREREQUISITE MATERIAL 700**

A.1 Plotting Points 700

A.2 Identifying Types of Numbers 700

A.3 Absolute Value 701

A.4 Performing Operations with Real Numbers 702

A.5 Exponents 703

A.6 Order of Operations 703

A.7 Constants, Variables, Expressions, and Equations 704

A.8 Distributive Law 704

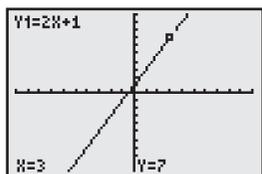

A.9 Combining Like Terms 704

A.10 Solving Linear Equations in One Variable 705

A.11 Solving Equations in Two or More Variables 707

A.12 Equivalent Expressions and Equivalent Equations 708

Tracing a curve (p. 710)

**B****USING A TI-83 OR TI-84 GRAPHING CALCULATOR 709**

- B.1** Turning a Graphing Calculator On or Off 709
- B.2** Making the Screen Lighter or Darker 709
- B.3** Entering an Equation 710
- B.4** Graphing an Equation 710
- B.5** Tracing a Curve without a Scatterplot 710
- B.6** Zooming 710
- B.7** Setting the Window Format 711
- B.8** Drawing a Scatterplot 712
- B.9** Tracing a Scatterplot 712
- B.10** Graphing Equations with a Scatterplot 713
- B.11** Tracing a Curve with a Scatterplot 713
- B.12** Turning a Plotter On or Off 713
- B.13** Constructing a Table 713
- B.14** Constructing a Table for Two Equations 714
- B.15** Using “Ask” in a Table 714
- B.16** Finding the Regression Equations 714
- B.17** Drawing Two Scatterplots 715
- B.18** Finding the Intersection Point(s) of Two Curves 716
- B.19** Finding the Minimum Point(s) or Maximum Point(s) of a Curve 716
- B.20** Storing a Value 717
- B.21** Finding Any  $x$ -Intercepts of a Curve 717
- B.22** Turning an Equation On or Off 717
- B.23** Finding Coordinates of Points 718
- B.24** Graphing Equations with Axes “Turned Off” 718
- B.25** Entering an Equation by Using  $Y_n$  References 718
- B.26** Responding to Error Messages 718

**C****USING STATCRUNCH 721**

- C.1** Entering Data 721
- C.2** Constructing Scatterplots 721
- C.3** Finding Linear or Quadratic Regression Equations 722
- C.4** Finding Exponential Regression Equations 722

ANSWERS TO ODD-NUMBERED EXERCISES 725

INDEX I-1

Sample Preface. Not for Distribution.

# Preface

---

*“The question of common sense is always, ‘What is it good for?’—a question which would abolish the rose and be answered triumphantly by the cabbage.”*

—James Russell Lowell

These words seem to suggest that poet and editor James Russell Lowell (1819–1891) took Intermediate Algebra. How many times have your students asked, “What is it good for?” After years of responding “You’ll find out in the next course,” I began an ongoing quest to develop a more satisfying and substantial response to my students’ query.

This ongoing quest has led me to author three algebra texts and, most recently, a new Prestatistics text, *A Pathway to Introductory Statistics*. I have a passion for using authentic data, centered around a curve-fitting approach to help students learn in context.

**Curve-Fitting Approach** Although there are many ways to center an Intermediate Algebra course around authentic applications, I chose a curve-fitting approach for several reasons. A curve-fitting approach

- allows great flexibility in choosing interesting, authentic, current situations to model.
- emphasizes concepts related to functions in a natural, substantial way.
- deepens students’ understanding of functions because it requires students to describe functions graphically, numerically, symbolically, and verbally.
- unifies the many diverse topics of a typical Intermediate Algebra course.

There is yet one more reason I chose a curve-fitting approach. Intermediate Algebra is meant to prepare some students for a Calculus STEM track and others for Statistics, Liberal Arts Math, and so on (non-STEM tracks). This is a great challenge because Calculus, Statistics, and so on are vastly different courses not only in content but also in the type of problem solving they require. Teaching algebra with curve fitting empowers instructors to prepare students for all types of content and problem solving.

To fit a curve to data, students learn the following four-step modeling process:

1. Examine the data set to determine which type of model, if any, to use.
2. Find an equation of the model.
3. Verify that the model fits the data.
4. Use the model to make estimates and predictions.

This four-step process weaves together topics that are crucial to the course. Students must notice numerical patterns from data displayed in tables, recognize graphical patterns in scatterplots, find equations of functions, graph and evaluate functions, and solve equations.

Not only does curve fitting foster cohesiveness within chapters, but it also creates a parallel theme for each chapter that introduces and discusses a new function. This structure enhances students’ abilities to observe similarities and differences among fundamental functions such as linear functions, exponential functions, logarithmic functions, quadratic functions, rational functions, and radical functions.

Curve fitting serves as a portal for students to see the usefulness of mathematics so they become fully engaged in the class. Once involved, students are more receptive to all aspects of the course.

# Sample Preface. Not for Distribution.

## NEW TO THE SIXTH EDITION

Students will benefit from the following changes to the sixth edition of *Intermediate Algebra: Functions and Authentic Applications*:

- In previous editions, all authentic data sets in the print text were represented by similar, yet generic (inauthentic), data sets in MyLab Math to provide algorithmically generated similar exercises for students completing homework in MyLab Math. However, in the new edition, where possible, MyLab Math exercises maintain the authenticity of the data. This has been accomplished by sampling from a large data set to generate six authentic data sets that inherit the same trend.
- **MyLab Math Exercises:** The number of skill, modeling, and conceptual exercises in MyLab Math has been increased to fully capture the spirit of the print textbook. In fact, for the first time ever, Related Review exercises (described later in the preface) will be assignable in MyLab Math.
- **Large Data Sets:** Many students who use this textbook will not perform regression analysis in their careers, but some *will* work with large data sets. Such work will also help prepare students to take Statistics. With this in mind, new exercises that involve large data sets have been sprinkled throughout the textbook. They directly follow the heading “Large Data Sets.” The data sets consist of as many as thousands of rows and tens of columns of data.
- **DATA Downloadable Data Sets:** To support the appropriate use of technology when completing exercises and labs, data sets that consist of 16 or more data values can now be downloaded as Excel files at MyLab Math and at the Pearson Downloadable Student Resources for Math and Statistics website:  
<http://www.pearsonhighered.com/mathstatsresources>. These data sets in MyLab Math can also be opened in StatCrunch. Exercises that involve such data sets are flagged in the print textbook by the icon .
- **Augmented Data Sets:** To make the data sets as current and relevant as possible, 172 data sets in examples and exercises have been augmented to include values for recent years.
- **New Data Sets:** 150 data sets in examples and exercises have been replaced with more compelling and contemporary topics such as immigration, legalization of marijuana, and trust in newspapers.
- **Climate Change Labs:** All five Climate Change labs have been updated to address the latest data and political events concerning this incredibly important global issue.
- **Graphing Calculator Instructions:** Appendix B, which consists of TI-83/TI-84 graphing calculator instructions, was available only online in the previous edition. To make the appendix more accessible to students, it is now included in the textbook.
- **StatCrunch Instructions:** Some departments that require StatCrunch for their Statistics courses introduce StatCrunch in their Intermediate Algebra courses. To support such departments, Appendix C, which contains StatCrunch instructions, has been added to the textbook.
- **Section Opener Explorations:** Explorations that can be used at the start of a section have been moved from the preceding section to the current section. The new placement will visually remind instructors to assign such explorations and make it easier for students to access them.
- **Statistics Terminology:** To better support students who will take Statistics, the terminology has been improved: The words *scattergram*, *independent variable*, and *dependent variable* have been replaced with *scatterplot*, *explanatory variable*, and *response variable*.

- **Logarithm Preparation:** The technique of converting expressions in exponential form to and from expressions in radical form has been added to Section 4.2 to better lay a foundation for logarithms in Chapter 5.
- **Color:** More color has been used to enhance connections between equations, graphs, tables, and coordinates of ordered pairs.

## CONTINUED FROM THE FIFTH EDITION

**Unique Organization** Some students find it hard to stay interested because they've "seen it all before" in Elementary Algebra. To address this issue, content that will be new to most students is presented in Sections 1.1, 1.4, and 1.6, as well as in most of Chapters 2–11. Section 1.1 sets the tone that this course will be different, interesting, alive, and relevant, inviting students' creativity into the classroom.

**Early Functions** Although some textbooks introduce functions early in the course, the concept is rarely included in subsequent sections, and when it is included, the treatment is light. In this textbook, functions are introduced early (Section 1.6) and are emphasized throughout the book in meaningful ways such as by curve fitting, providing students with a solid foundation for subsequent courses such as Trigonometry, College Algebra, and Precalculus.

**Early Logarithmic Functions** Unlike the organization in most textbooks, exponential functions and logarithmic functions are presented before polynomial functions, rational functions, and radical functions. The coverage of exponential functions directly follows that of linear functions so students can see the dual nature of these two functions (by comparing the slope addition property with the base multiplier property). Professors who have used the preceding editions have commented over and over again how much they value an early-logarithm organization. Although rational functions and radical functions present their own challenges, most students have more difficulties with logarithmic functions, and it pays to have them learning about this concept while they still have energy.

**Modeling Exercises** To give this sixth edition a current and lively feel, the vast majority of the hundreds of modeling exercises in the text have been updated or replaced. Most of the application exercises contain tables of data, but some describe data in paragraph form to give students practice in picking out relevant information and defining variables. Both types of applications are excellent preparation for subsequent courses (especially Statistics).

**Group Explorations** All sections of this text contain one to three explorations that support student investigation of a concept. Instructors can use explorations as collaborative activities during class time or as part of homework assignments. The "Section Opener" explorations are meant to have students discover the section's concepts at the start of class. The other explorations are designed to have students apply concepts they have learned in the section in new ways. Both types of explorations can empower students to become active explorers of mathematics and open the door to the wonder and beauty of the subject.

## Sample Preface. Not for Distribution.

**Taking It to the Lab Sections** Laboratory assignments have been included at the end of most chapters to deepen students' understanding of concepts and the scientific method. These labs reinforce the idea that mathematics is useful. They are also an excellent avenue for more in-depth writing assignments.

Some of the labs are about climate change and have been written at a higher reading level than the rest of the text in order to give students a sense of what it is like to perform research. Students will find that by carefully reading (and possibly rereading) the background information, they can comprehend the information and apply concepts they have learned in the course to make estimates and predictions about this compelling, current, and authentic situation.

**Balanced Extensive Homework Sections** Most exercise sets contain a large number of modeling, skill, and conceptual exercises to allow professors maximum flexibility in setting assignments.

**Related Review** These exercises (in every section of Chapters 4–11) relate current concepts to previously learned concepts. Such exercises assist students in seeing the “big picture” of the course. This exercise type is now also assignable in MyLab Math.

**Expressions, Equations, Functions, and Graphs** These exercises (in every section of Chapters 4–11) help students gain a solid understanding of those core concepts, including how to distinguish among them.

**Technology** The text assumes students have access to technology such as the TI-83 or TI-84 graphing calculator, Excel, or StatCrunch. Technology of this sort allows students to construct scatterplots and check the fit of a model quickly and accurately. It also empowers students to verify their results from Homework exercises and efficiently explore mathematical concepts in the Group Explorations.

The text supports instructors in holding students accountable for all aspects of the course without the aid of technology, including finding equations of models. (Regression equations are included in the Answers section because it can be difficult or impossible to anticipate which points a student will choose in trying to find a reasonable equation.)

**Appendix A: Reviewing Prerequisite Material** Appendix A can be used to remind students of important topics typically addressed in an Elementary Algebra course. Examples and exercises are included in each section.

**Appendix B: Using a TI-83 or TI-84 Graphing Calculator** Appendix B contains step-by-step instructions for using the TI-83 and TI-84 graphing calculators. A subset of this appendix can serve as a tutorial early in the course. In addition, when the text requires a new calculator skill, students are referred to the appropriate section in Appendix B.

**Appendix C: Using StatCrunch** Appendix C contains step-by-step instructions for using StatCrunch. The appendix describes how to enter data, construct scatterplots, and find regression equations.

**Exposition** If students can't make sense of the prose, it doesn't matter how precise it is. One of my top goals is to write descriptions that are straightforward, accessible, clear, and rigorous.

**Tips for Success** Many sections close with tips that are intended to help students succeed in the course. A complete listing of these tips is included in the Index.

**Additional Topics Chapter** Topics typically taught in Intermediate Algebra that cannot be connected with a curve-fitting approach at the appropriate level are assembled in Chapter 11. Each section contains a Section Quiz feature. The union of these quizzes can be used as a set of review exercises for Chapter 11. Instructors who wish to “cut and paste” sections from that chapter into earlier chapters can append these quizzes to the appropriate Chapter Review exercises.

## GETTING IN TOUCH

I would love to hear from you and would greatly appreciate receiving your comments regarding this text. If you have any questions, please ask them, and I will respond.

Thank you for your interest in preserving the rose.

Jay Lehmann

# Resources for Success

## Get the Most Out of MyLab Math

for *Intermediate Algebra*, Sixth Edition, by Jay Lehmann

When it comes to developmental math, one size does not fit all. Jay Lehmann's *Intermediate Algebra* offers market-leading content written by an author-educator, tightly integrated with the #1 choice in digital learning—MyLab Math. MyLab Math courses can be tailored to the needs of instructors and students, while weaving the author's voice and unique approach into all elements of the course. Learning mathematical concepts through authentic data comes through from the text to the MyLab course seamlessly.

Take advantage of the following resources to get the most out of your MyLab Math course.

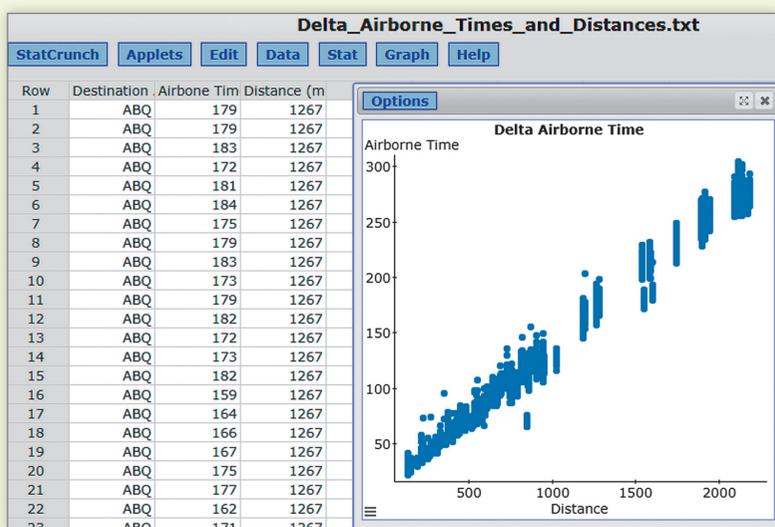

### Conceptual Understanding and Motivation

**New! Large Data Sets** in exercises and explorations get students accustomed to working with as many as ten thousand rows of data.

Data sets that involve 16 or more values are available for download to support the appropriate use of technology. Noted with a  icon, these exercises are ideal for using technology, like StatCrunch or Excel, to analyze the data and synthesize concepts. In today's age of "big data," it's important for students to see how technology can efficiently and accurately help when working with large data sets.

#### Large Data Sets

53.  Access the data about airborne times and distances of Delta Airlines flights, which are available at MyLab Math and at the Pearson Downloadable Student Resources for Math & Stats website. Let  $T$  be the airborne time (in minutes) and  $D$  be the distance (in miles) for a flight.
- Construct a scatterplot of the data.
  - Give a possible reason why the scatterplot consists of vertically aligned clumps of data points.
  - On the basis of just the scatterplot, guess whether Delta offers more routes that are less than 1000 miles or greater than 1000 miles. On the basis of just the scatterplot, why is it not possible to be sure?
  - Print your scatterplot and draw a linear model.
  - Estimate the slope of the linear model. What does it mean in this situation?

**New! StatCrunch** is a web-based statistical software available from within the MyLab Math course that students can use to easily analyze data sets from exercises and the text. Through StatCrunch users can access tens of thousands of shared data sets, create and conduct online surveys, perform complex analyses using the powerful statistical software, and generate compelling reports.

**New! Select exercises with authentic data** have been carefully revised to retain authentic data values, even when regenerating algorithmically. Oftentimes students sacrifice working with real-world data when they regenerate exercises with new values in MyLab Math. In this revision, the author has taken special care to ensure that many exercises' algorithmic versions of the question still ask the student to work with actual data pulled from real-world situations.

**Homework: Section 1.4 Homework**

Score: 0 of 1 pt      4 of 10 (1 complete)

1.4.8

The temperature at which water boils (the boiling point) depends on elevation: The higher the elevation, the lower is the boiling point. At sea level, water boils at 212°F; at an elevation of 10,000 meters, water boils at about 153°F. Boiling points are listed in the table below for various elevations. Complete parts a. through d. to the right.

Boiling Points of Water	
Elevation (in thousands of meters)	Boiling Point (°F)
0	212
1	204
2	201
5	184
10	153
15	125

Determine the domain and range of the function.

The domain is  $-2 \leq x \leq 3$ .

**Updated! The video program** provides students with extra help for each objective of the textbook. The videos highlight key examples, and a modern interface allows easy navigation. Videos have been updated to reflect all changes in the current edition.

## Personalized Learning and Preparedness

**New! Skill Builder** exercises offer just-in-time additional adaptive practice. The adaptive engine tracks student performance and delivers questions to each individual that adapt to his or her level of understanding. This new feature allows instructors to assign fewer questions for homework, allowing students to complete as many or as few questions needed.

**Homework: Skill Builder Assignment**

Score: 0 of 1 pt      10 of 10 (0 complete)      HW Score: 0%, 0 of 10 pts

7.2.85

Use rational exponents to write as a single radical expression. Assume that all variables represent positive real numbers.

$$\sqrt[3]{7} \cdot \sqrt[4]{7^2}$$

Enter your answer in the answer box.

**Homework: Skill Builder Assignment**

Prerequisite: Understand the meaning of  $a^{m/n}$ .

Let's review a concept needed to answer your homework question.

Use radical notation to write the expression. Simplify if possible.

$$16^{\frac{3}{4}}$$

Select the correct choice below and, if necessary, fill in the answer box to complete your choice.

A.  $\frac{3}{16^4}$

B. The answer is not a real number.

Click to select and enter your answer(s) and then click Check Answer.

**Enhanced Sample Assignments** make course set-up easier by giving instructors a starting point for each section and chapter. Homework assignments have been carefully curated for this specific text and include a thoughtful mix of question types. Find these sample assignments in the Assignment Manager, under Copy and Assign Sample Assignments.

# Resources for Success

## Instructor Resources

*The following instructor resources are available to download from the Instructor Resource Center at [www.pearson.com](http://www.pearson.com), or in your MyLab Math course.*

### Instructor's Resource Manual

This manual, written by the author, contains suggestions for pacing the course and creating homework assignments. It discusses how to incorporate technology and how to structure project assignments. The manual also contains section-by-section suggestions for presenting lectures and for undertaking the explorations in the text.

### Power Points

These fully editable lecture slides include definitions, key concepts, and examples for use in a lecture setting and are available for each section of the text.

### Instructor's Solutions Manual

This manual includes complete solutions to the even-numbered exercises in the text.

### TestGen

TestGen enables instructors to build, edit, print, and administer tests by using a computerized bank of questions developed to cover all the objectives of the text. TestGen is algorithmically based, allowing instructors to create multiple, but equivalent, versions of the same question or test with the click of a button. Instructors can also modify test-bank questions or add new questions. Tests can be printed or administered online. The software and test bank are available for download from Pearson's online catalogue.

## Student Resources

### New! Concepts and Explorations Notebook: Working with Authentic Data

This new compelling resource for students correlates to the text and provides students with opportunities to dig into data and solve problems using pencil and paper. The workbook includes:

- Explorations that offer collaborative activities to support discovery of key concepts.
- Modeling exercises with authentic data that give students more practice on this multifaceted concept, that can be sometimes hard to fully accomplish through MyLab Math.
- Projects that can be either open-ended or more guided, and ask students to dig deeper into a data set and think critically.
- Graphing exercises that ask students to practice graphing on their own, beyond what they do in MyLab Math.
- Mini-Essay questions that prompt students to think conceptually, also beyond what they do in MyLab Math!

### Student's Solutions Manual

This manual contains the complete solutions to the odd-numbered exercises in the Homework sections of the text.

# To the Student

---

You are about to embark on an exciting journey. In this course, you will learn not only more about algebra but also how to apply algebra to describe and make predictions about authentic situations. “Authentic situations” might make you think twice, but this just means situations that are *really* happening in the world. This text contains data that describe hundreds of these situations. Most of the data have been collected from recent publications, so, the information is current and of interest to the general public. There is data about wearable devices, success in school, climate change, sports, and so on. I hope it interests you too.

**Working with authentic data will make mathematics more meaningful.** While working with data about authentic situations, you will learn mathematical concepts that will be easier to learn because they will be connected to familiar contexts. And you will see that almost any situation can be viewed mathematically. That vision will help you understand the situation and make estimates and/or predictions.

Many of the problems you will explore in this course involve data collected in a scientific experiment, survey, or census. The practical way to deal with such data sets is to use technology. So, a graphing calculator or computer system is required.

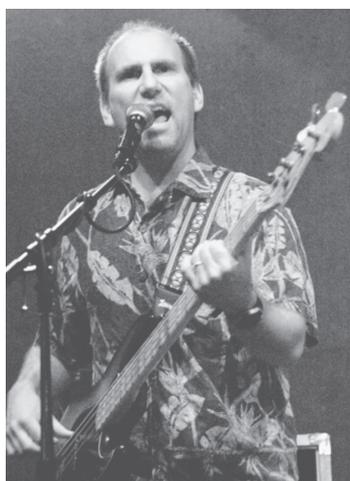

**Analyzing authentic situations is a lifelong skill.** We are living in the “age of data.” In addition to working with data sets in this text, your instructor may assign some of the labs. Here you will collect data through experiment or research. This will give you a more complete picture of how you can use the approaches presented in this text in everyday life, and likely in your lifelong careers. Being able to work with and understand data can lead to higher-paying jobs and success.

**Hands-on explorations are rewarding and fun.** This text contains explorations with step-by-step instructions that will lead you to *discover* concepts, rather than hear or read about them. Because discovering a concept is exciting, it is more likely to leave a lasting impression on you. Also, as you progress through the explorations, your ability to make intuitive leaps will improve, as will your confidence in doing mathematics. Over the years, students have remarked to me time and time again that they never dreamed that learning math could be so much fun.

**This text contains special features to help you succeed.** Many sections contain a Tips for Success feature. These tips are meant to inspire you to try new strategies to help you succeed in this course and future courses. If you browse through all the tips early in the course, you can take advantage of as many of them as you wish. Then, as you progress through the text, you’ll be reminded of your favorite strategies. A complete listing of Tips for Success is included in the Subject Index.

Other special features that can support you include Warnings, which can help you avoid common misunderstandings; Key Points summaries, which can help you review and retain concepts and skills addressed in the chapter you have just read; Related Review exercises, which can help you understand current concepts in the context of previously learned concepts; and Expressions, Equations, Functions, and Graphs exercises, which can help you understand and distinguish among these four core concepts.

**Feel free to contact me.** It is my pleasure to read and respond to e-mails from students who are using my text. If you have any questions or comments about the text, feel free to contact me.

Jay has a wide variety of interests. He is pictured here playing with his rock band, The Procrastinistas. (Photo courtesy of Rick Gilbert)

# Acknowledgments

---

Writing a modeling text is an endurance run I couldn't have completed without the dedicated assistance of many people. First, I'm greatly indebted to Keri, my wife, who yet again served as an irreplaceable sounding board for the countless decisions that went into creating this book.

I acknowledge several people at Pearson Education. I'm very grateful to Editor-in-Chief Michael Hirsch, who has shared in my vision for this text and made significant investments to make that vision happen. The book has been greatly enhanced through the support of Senior Acquisitions Editor Rachel Ross, who made a multitude of contributions, including assembling an incredible team to develop and produce this text. The team includes Content Producer Tamela Ambush, who handled countless tasks to support me in preparing the manuscript for production, leading to a significantly better book.

Heartfelt thanks goes to Project Managers Thomas Russell and Erin Hernandez, who both orchestrated the many aspects of production.

And thanks to Rick Gilbert for the awesome photograph in the "To the Student" section of the author performing with his band, The Procrastinistas, at the Hotel Utah in San Francisco.

I thank these reviewers, whose thoughtful, detailed comments helped me sculpt this text into its current form:
