MyMathLab® with Integrated Review
For Developmental Math

How do you provide support to students who are underprepared in your developmental math courses? Pearson is proud to announce that Integrated Review MyMathLab™ is now available for developmental math! Integrated Review in MyMathLab offers just-in-time diagnosis and review of foundational skills as needed throughout the course. These new solutions were developed for developmental math to assist when:

- Students need a quick refresher on the pre-requisite material in a “just-in-time” fashion.
- Students self-placed into a course, or were right at the cut off score for placement, and are underprepared.
- Prerequisite courses (such as Basic Math or Prealgebra) were consolidated, eliminated, or moved to Adult Basic Ed.

How it Works!

- Students begin most chapters by completing a Skills Check assignment to pinpoint which pre-requisite topics, if any, they need to review.
- Students who demonstrate mastery of the review topics move straight into the core content.
- Students who require additional review are guided to specific videos and Integrated Review worksheets to help them remediate, while the personalized review homework assignment provides extra support and practice, as well.

- Each course is Ready to Go, with integrated review assignments pre-built and pre-assigned - making it easier than ever to set up your course!
- Integrated Review worksheets are included in the MML course, but are also available as a print option. The textbook remains the same!
- Don’t see the title you’re looking for here? Talk to your Pearson rep to learn about customizing your own Integrated Review course (adoption minimums may apply): www.pearsonhighered.com/replocator

To download an Integrated Review course, search by author last name when creating a new course in your MyMathLab account – and then select the course listing with “Integrated Review” in the title.
